

A Brief Introduction to GNU Guix

David Thompson
davet@gnu.org

Codefest 2014
Cambridge, MA

- ▶ Introduction
- ▶ What is GNU Guix?
- ▶ Packages
- ▶ Operating Systems
- ▶ Demo

Who am I?

- ▶ My name is David Thompson
- ▶ I am the Web Developer at the Free Software Foundation
- ▶ I am a contributor to GNU Guix and GNU Guile

What is Guix?

- ▶ A purely functional package manager for the GNU system, and a distribution thereof
- ▶ Dependable, hackable, and liberating
- ▶ Based on Nix
- ▶ Written in Guile Scheme

Dependable

In addition to standard package management features, Guix supports transactional upgrades and roll-backs, unprivileged package management, per-user profiles, and garbage collection.

Hackable

It provides Guile Scheme APIs, including high-level embedded domain-specific languages (EDSLs), to describe how packages are built and composed.

What is Guix?

Liberating

A user-land free software distribution for GNU/Linux comes as part of Guix.

Packages

- ▶ The package build and installation process is seen as a function, in the mathematical sense
- ▶ That function takes inputs, such as build scripts, a compiler, and libraries, and returns an installed package
- ▶ As a pure function, its result depends solely on its inputs
- ▶ Build processes are run in isolated environments, where only their explicit inputs are visible

Packages

```
(define hello
  (package
    (name "hello")
    (version "2.8")
    (source (origin
              (method url-fetch)
              (uri (string-append
                    "mirror://gnu/.../hello-" version
                    ".tar.gz"))
              (sha256 (base32 "0wqd...dz6"))))
    (build-system gnu-build-system)
    (synopsis "Hello, GNU world: An example GNU package")
    (description "Produce a friendly greeting.")
    (home-page "http://www.gnu.org/software/hello/")
    (license gpl3+)))
```

Operating Systems

```
(operating-system
  (host-name "codefest-2014")
  (timezone "America/New_York")
  (locale "en_US.UTF-8")
  (bootloader (grub-configuration (device "/dev/sda")))
  (file-systems
    (list (file-system (mount-point "/") (device "dummy") (type "dummy"))
          %binary-format-file-system))
  (users (list (user-account
                (name "dave")
                (group "users")
                (supplementary-groups '("wheel")) ; allow use of sudo
                (password "P@ssw0rd")
                (comment "Guix is pretty neat")
                (home-directory "/home/dave")))))
  (issue "Hello, Codefest 2014!")
  (services (cons* (slim-service #:auto-login? #t #:default-user "dave")
                  (static-networking-service "eth0" "10.0.2.10"
                                             #:gateway "10.0.2.2")
                  (avahi-service)
                  (dbus-service (list avahi))
                  %base-services))
  (packages (cons* emacs xterm avahi %base-packages)))
```

Demo

- ▶ Build VM image
- ▶ Install packages
- ▶ Rollback

Thanks!

- ▶ Guix 0.7 to be released in the coming weeks with bootable USB disk image
- ▶ We need your help to package useful software!
- ▶ Join us in #guix on freenode or the guile-devel@gnu.org mailing list
- ▶ Source code and documentation available at <https://gnu.org/s/guix>
